

# Online Doctor Consultation Mobile Application

Industry:  
Healthcare

Client:  
Healthcare  
Service  
Provider

Location: India

## CHALLENGE

Our client wanted to develop an online consultation application that would allow anyone with a health problem to consult with doctors any time of the day, wherever they are.

## SOLUTION

Our team helped build an online consultation system that would allow users to search for doctors by specialty, location or rating, schedule appointments, and get an online consultation (video/phone/chat) on any device and at any time.

The app also allows users to securely store, manage and share their own and their families' health and medical information. The users can upload pictures of a problem, reports, lab results and other documents to share with the doctors.

The app allows the doctors to answer the questions, assess the patients' condition, review documents, and provide prescriptions if needed.

The app also integrates with the pharmacies' systems for home-delivery and offers secure online payment options.

## TECHNOLOGY STACK

AngularJS  
Mongo DB  
QuickBlox Live Video Streaming Server  
Apache Server

## BENEFITS

The application allows:

- The users to save time and money by providing 24/7 immediate access to doctors on any device.
- The users to store and manage medical information securely and easily.
- The users to contact doctors when they need a second opinion on an ongoing medical issue.
- The doctors to set their own schedule and have an additional income.
